## 2 Interactions

In WIKIPATHWAYS/GPML there are basically two types of interaction templates. The first being two DataNodes connected by a graphical line.

The second being at least three DataNodes interacting with each other, where at least one interaction is interacting with another interaction.

There are 21 different interaction types being recognized. These are Line, Arrow, TBar, Receptor, Ligand-Square, ReceptorBound, MimNecessaryStimulation, MimBinding, MimConversion, MimStimulation, MimModification, MimCatalysis, MimInhibition, MimCleavage, MimiCovalentBond, MimBranchingLeft, MimBranchingRight, MimTranscriptionTranslation, MimGap.

So called markers on the lines indicating an interaction gives both directionality and the type of interaction.

## 2.1 Line

### 2.1.1 Pathway snippet

Title: Line

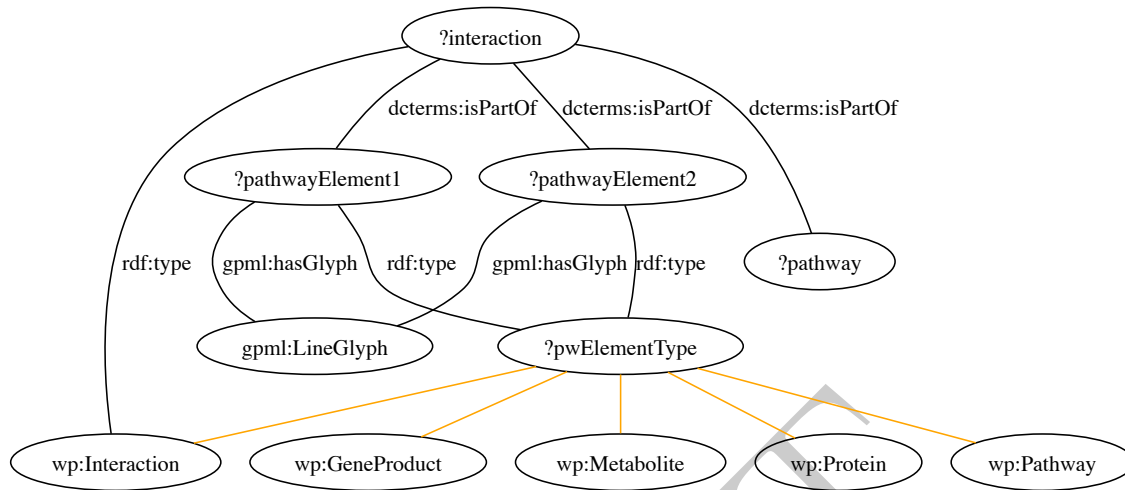

### 2.1.2 Description

### 2.1.3 GPML

Listing 2: Line

```
<DataNode TextLabel="DataNode" GraphId="ceece" Type="GeneProduct">
  <Graphics CenterX="88.0" CenterY="49.0" Width="80.0" Height="20.0" ZOrder="32768"
    FontSize="10" Valign="Middle" />
  <Xref Database="" ID="" />
</DataNode>
<DataNode TextLabel="DataNode" GraphId="fbc03" Type="GeneProduct">
  <Graphics CenterX="248.0" CenterY="49.0" Width="80.0" Height="20.0" ZOrder="32768"
    FontSize="10" Valign="Middle" />
  <Xref Database="" ID="" />
</DataNode>
<Interaction GraphId="id1f54355d">

## 2.20 MimTranscriptionTranslation

### 2.20.1 Pathway snippet

**Title:** Transcription Translation

### 2.20.2 Description

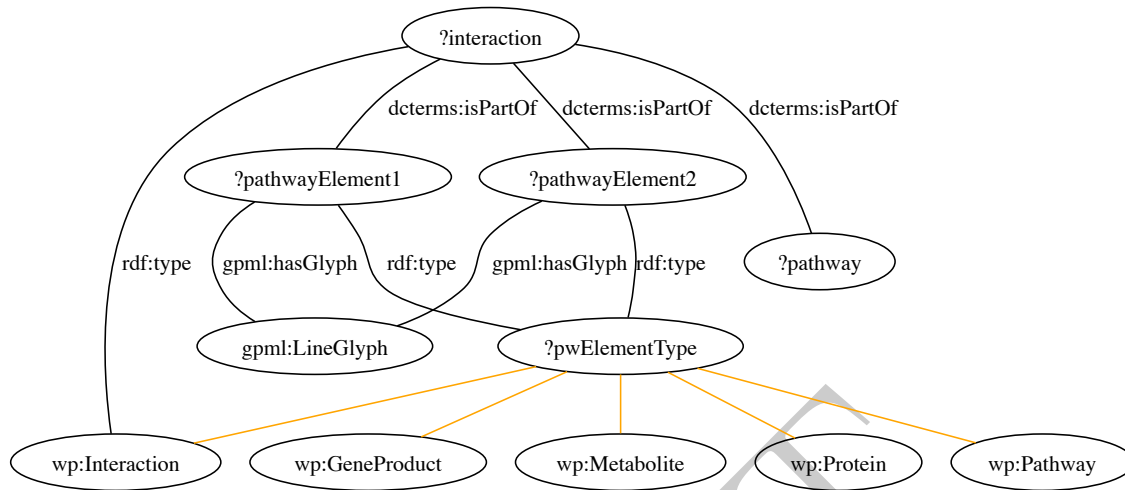

A type of production without loss that involves a template (e.g. the polymerization of a nucleic acid macromolecule from a nucleic acid macromolecule template). The template reaction glyph should be used to describe transcription or translation, but the glyph itself is insufficient to distinguish between the two biological processes.
